

## CLAIMS

What is claimed is:

1                   1. A method for selecting a print job parameter including the steps  
2                   of:  
3                   ascertaining a pre-selected toner density setting; and  
4                   selecting a print media source based upon the pre-selected  
5                   toner density setting.

1                   2. The method of Claim 1 wherein the step of selecting a print  
2                   media source based upon the pre-selected toner density setting further  
3                   comprises selecting a draft media source based upon an identification of a  
4                   draft toner density setting.

1                   3. The method of Claim 1 wherein the step of selecting a print  
2                   media source based upon the pre-selected toner density setting further  
3                   comprises selecting a standard media source based upon an identification of  
4                   a standard toner density setting.

1                   4. A method for selecting a print job parameter including the steps  
2                   of:  
3                   ascertaining a pre-selected print media source setting; and  
4                   selecting a toner density setting based upon the pre-selected print  
5                   media source setting.

1                   5. The method of Claim 4 wherein the step of selecting a toner  
2                   density setting based upon the pre-selected print media source setting further

*Case 10003088-1*

3 comprises selecting a draft toner density setting based upon an identification  
4 of a draft print media setting.

1 6. The method of Claim 4 wherein the step of selecting a print  
2 media source based upon the pre-selected toner density setting further  
3 comprises selecting a standard media source based upon an identification of  
4 a standard toner density setting monitor.
